

Webinar:

Robotic assisted Sacrocolpopexy and alternatives

Monday, 15th June 2020, 4:00-5:30 pm

Klinikum Nürnberg
Wir sind für Sie da!

Speakers:

Prof. Dr. med. Cosima Brucker
Head of Gynecology Department
Klinikum Nürnberg

Dimitrios Bolovis
Consultant Gynecologic
and Robotic Surgery
Klinikum Nürnberg

Dear colleague you are invited!

Minimally invasive sacrocolpopexy has been the gold standard for pelvic floor repair. It is considered as one of the most effective methods to correct pelvic organ prolapse and improve quality of life.

Nevertheless, there are limitations to this method, some of them only becoming apparent during surgery. Therefore, troubleshooting and alternatives are needed to be presented and applied either as the upfront method of choice or intraoperatively as an alternative surgical solution.

In our interactive seminar we will address these issues allowing participants to reflect current standards and to adopt innovative approaches into their surgical repertoire.

We are looking forward to welcome you!
